

IAARC's bridges the gap between local stakeholders and international scale-up and knowledge transfer

The IAARC Chapters & Innovation Hubs represent a novel platform for collaborative knowledge exchange and provide a new way for local innovators or businesses to expand their network and collaborate within the local industry, in the field of automation and robotics in construction. The major goal of the Chapters and Innovation Hubs is to bridge the gap between the local stakeholders and international scale-up of technology and business ideas.

IAARC Chapters & Innovation Hubs encompass a broad range of networks and local cluster (student chapters, knowledge-sharing initiatives, incubators, innovation and start-up parks, living labs, etc.) focussed on aspects in the scope of automation and robotics in construction.

The IAARC Chapters & Innovation Hubs unite these clusters and networks under a unique brand to enhance their visibility, facilitate knowledge sharing and complementary activities among them, and support with scaling up ideas and innovations.

Meet our Chapters and Innovation Hubs and learn how to set-up or register one:
